When lives are on the line, reliability matters. That's why when an application demands fail-safe computer architecture that withstands harsh conditions, defense and industry leaders choose Crystal Group rugged electronics.

Crystal Group designs and manufactures commercial off-the-shelf and customized rugged computer hardware and provides system integration, configuration management, product life-cycle planning, and complete technical support. The employee-owned small business is fully operated in Hiawatha, Iowa, where it was founded in 1987.

Combat-proven rugged computing devices from Crystal Group include industry-leading servers, displays, networking products, embedded computers, and data storage backed by 5+ year warranties. Crystal Group is certified to quality management standards AS9100C:2009 and ISO 9001:2008, and its products meet or exceed military, IEEE, and IEC industrial standards.

Reliability matters. Crystal Group delivers. Superior quality you can trust.

A clear advantage.

CRS-8000

Compact Radio Monitoring System

EDGE-T

Extended Air Defence Ground Environment – Transformation

LEAPP

Land Environment Air Picture Provision

LMV

Littoral Mission Vessel

E-7A Wedgetail

AEW&C –

Airborne Early Warning and Control

MESA –

Multi-Role Electronically Scanned Array

MRJ

Mitsubishi Regional Jet

MILGEM Project

TASMUS

TTWCS

Tactical Tomahawk Weapons Control System

CRYSTAL GROUP INTERNATIONAL DEPLOYMENTS

CRS-8000

Radio monitoring and direction finding system detects, records, and analyzes signals.

EDGE-T

Centralized command-and-control center integrates battle-space monitoring and threat alerts.

LEAPP

State-of-the-art system detects, tracks, logs, and displays air activity within range of integrated sensors.

LMV

Multi-role ship boasts automation, remote monitoring, and advanced combat information center.

E-7A Wedgetail

AE&WC

Battlespace management system gathers, analyzes, and shares data from various sources to critical assets.

MESA

MESA radar provides air-to-air and air-to-surface coverage, friend/foe identification, and special track beams.

MRJ

Computer systems capture and process data essential to the advancement and certification of the new commercial jet.

MILGEM Project

Modern, multipurpose patrol warship is capable of fulfilling a wide range of missions in a littoral combat environment.

TASMUS

Mobile network-centric communication infrastructure uses data to present a common battlefield picture.

TTWCS

Critical part of the Tomahawk Weapons System computes the long-range missile's route to strike targets.

RS112

RS235
