

### Surveillance Simplified

Organizations across the globe are turning to digital video surveillance to secure their sites and assets. Unfortunately, most solutions are clunky, difficult to install, and employ a limited feature set making deploying these systems a serious chore.

The DS200 dramatically simplifies deployment by providing a flexible topography and an expandable feature set. Not only can the DS200 monitor switches, analog sensors (such as tank levels), and motion detectors, it serves as a fully functional digital video recording system sporting a state of the art web based interface. Able to integrate virtually any wired or wireless IP camera, the system provides unprecedented performance and flexibility in the industry.

### Typical Applications

- Remote site security: 24/7 video surveillance with optional 4G LTE cellular radio support. Local internet connectivity is not required.
- Large facility monitoring: scalable deployment allows for any size facility with a flexible installation schedule.
- Customizable event marking: mark video clips of motion, unauthorized filling, tank overflow, fuel/fluid spillage...
- Mobile video surveillance: school bus, public transit, law enforcement.

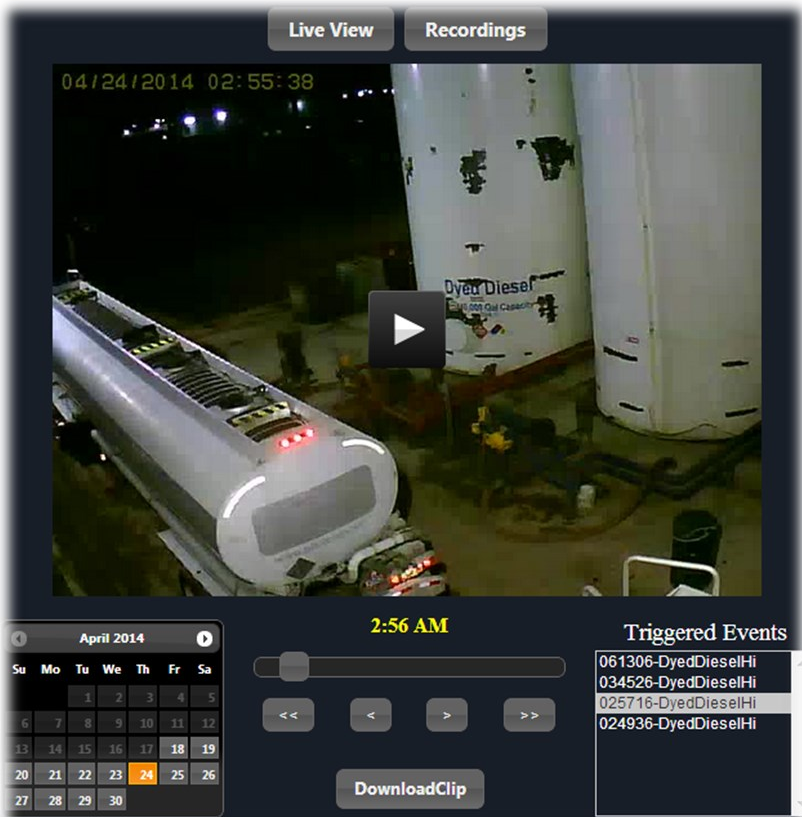

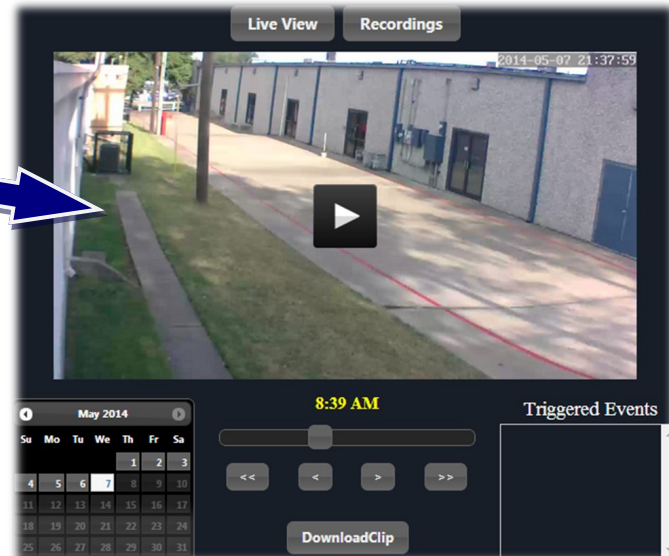

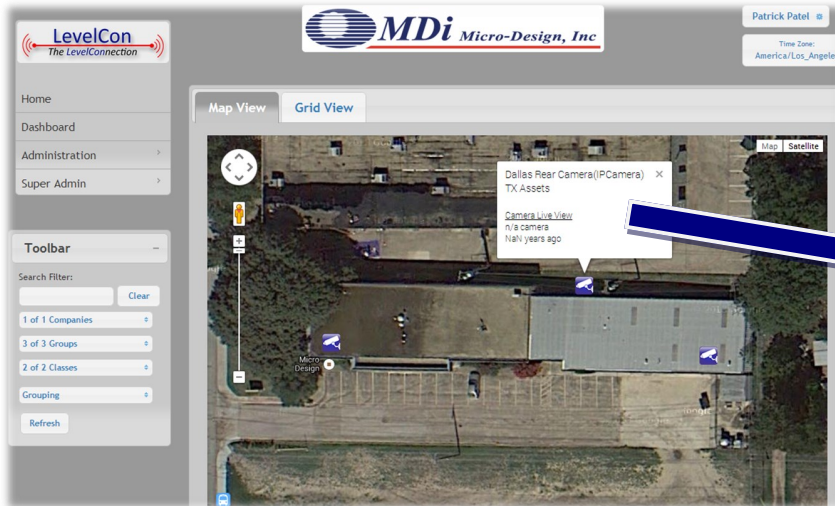

### Features

-  Motion Detection
-  Custom Event Video Triggers
-  Solid State Data Storage (no more hard drive headaches)
-  RS232/RS485/UART Modbus Support Option
-  GSM/CDMA 4G LTE Support Option
-  802.11b/g/n WIFI
-  24/7 Access to Data on LevelCon Cloud
