

# Ethernet I/O: BusWorks® NT Series

## NT2510/2530 Ethernet Multi-Function I/O Modules

4 analog inputs ◆ 2 analog outputs ◆ 4 discrete I/O ◆ Ethernet I/O plus Expansion I/O ◆ Multi-protocol support

The BusWorks® NT2000 series offers a cost-effective, modular solution for Ethernet remote I/O systems. Two module types are available. NTE Ethernet models provide the protocol interface plus I/O signal processing channels. NTX expansion modules can add extra I/O channels when mated to any NTE Ethernet communication module.

NT2510 modules offer 4 current inputs, 2 current outputs, and 4 discrete I/O channels. NT2530 models have voltage input. NTE Ethernet models provide a network interface to monitor and control I/O signals. Appending NTX expansion modules can interface up to 24 analog and 16 discrete I/O on a single IP address

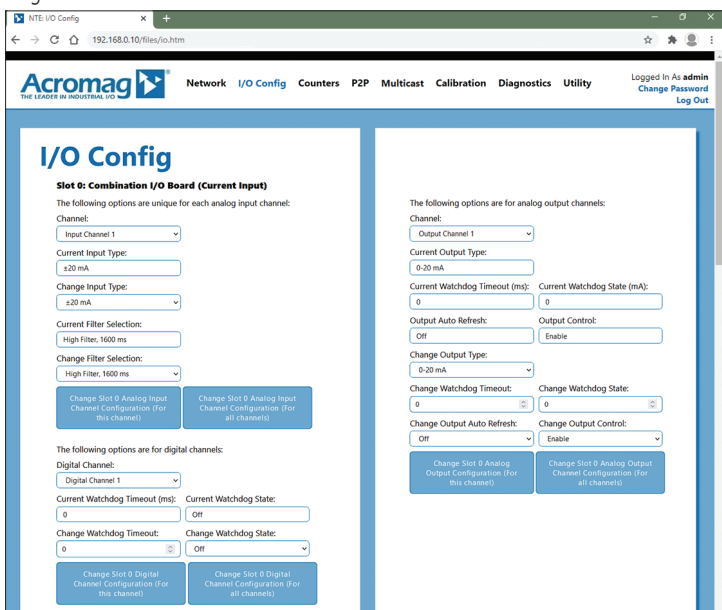

Applications include monitoring and controlling analog signals representing temperature, pressure, level, and flow. Discrete I/O sense and control levels on motors, lamps, valves, and other equipment.

An isolated RS-485 bus links up to three expansion modules to the Ethernet module with connectors that join along the DIN rail. This internal NT bus distributes power and communication between the modules. Users can mix analog, temperature, and discrete I/O modules across the NT bus.

Acromag's i2o® messaging technology allows direct peer-to-peer multicast communication between remote modules without a master controller.
