INTRODUCTION

This AGS-7230 series product is loaded with luxuriant security features including VPN, firewall, NAT, port forwarding, DHCP server and many other powerful features for outdoor IP surveillance applications. The redundancy design in fallback 12-48 VDC power terminal.
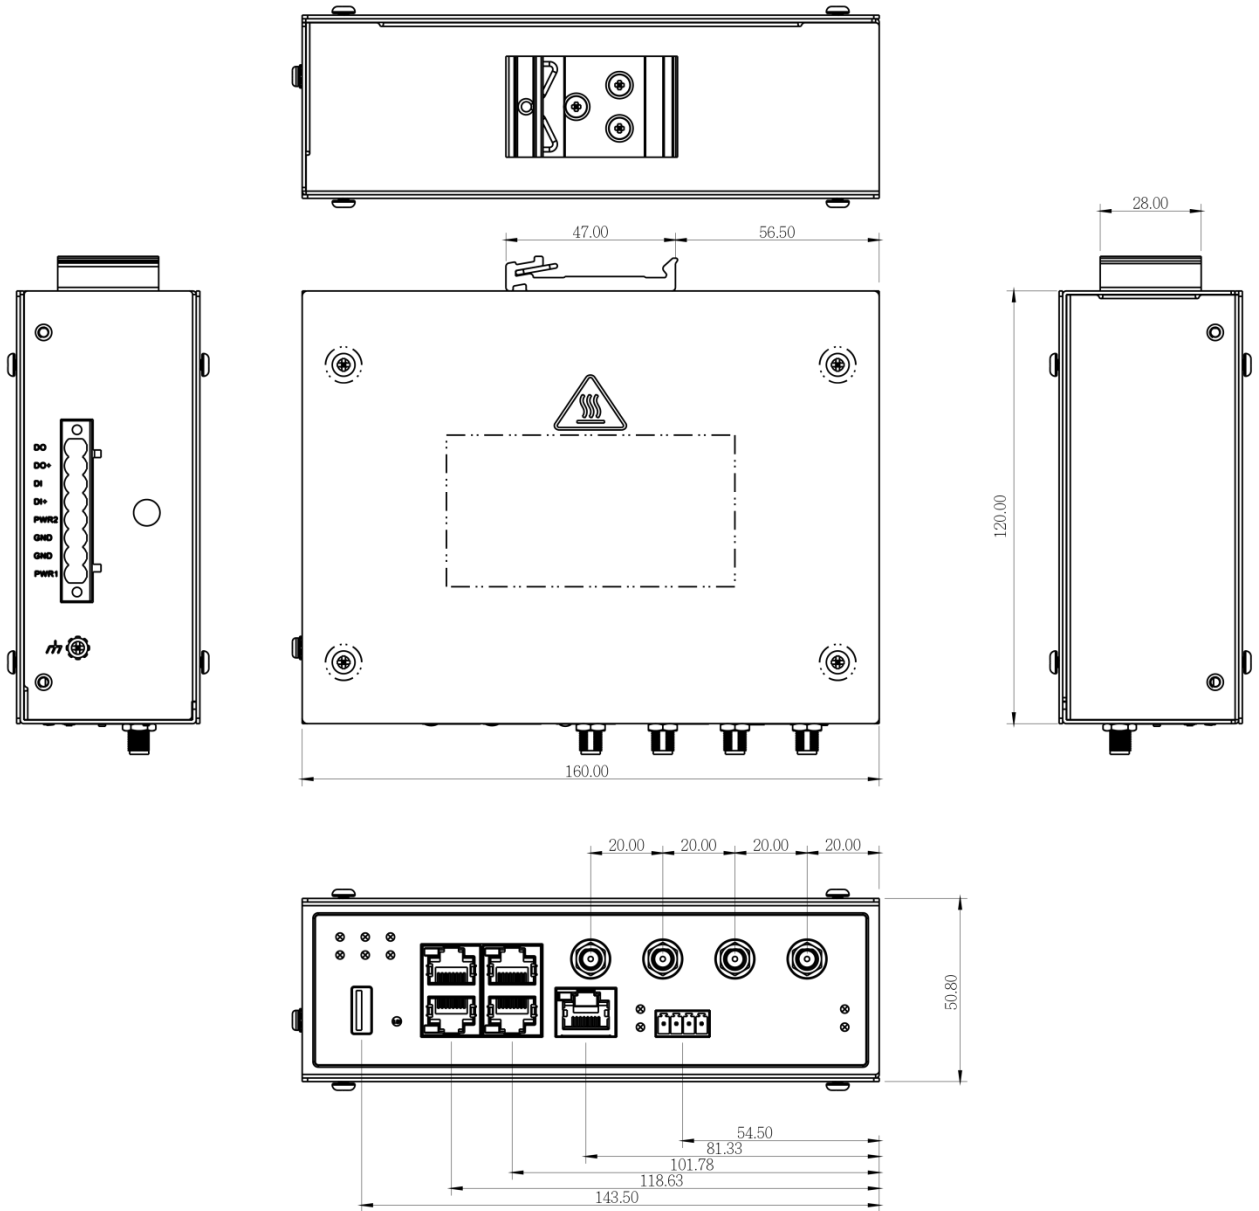

With built-in 802.11ac/n compliant single band or dual band WiFi module, you just need to find out an available wireless network (or Access Point), and the WiFi VPN Gateway can simply connect to the wireless network and connect your filed devices to the local management center.By VPN tunneling technology, remote sites easily become a part of Intranet, and all data are transmitted in a secure (256-bit AES encryption) link. The feature of DI/DO allows gateway to have real-time response whenever events are detected by sensors.

For wireless M2M (Machine-to-Machine) applications, ANTAIRA Wireless Gateway is absolutely the right choice.
